

# Conveniently deploy uninterruptible power anywhere, anytime

Ready to roll into action, the Eaton® Mobile UPS Trailer provides an ideal solution for organizations seeking to support critical infrastructure upgrades, short-term projects or special events requiring backup power.

Prefabricated and assembled into a single enclosure, the self-contained system is comprised of a 1.2 MW Eaton Power Xpert® 9395P uninterruptible power system (UPS) with lithium-ion batteries; switchboard; automatic transfer switch; mini power center; HVAC system; and fire detection with dry-agent fire suppression systems to protect the trailer and its electronics. The enclosure is then mounted onto a drop-deck trailer, enabling customers to seamlessly deploy the solution at any location.

Because the solution is completely assembled off-premises and utilizes a quick connect system, the Eaton Mobile UPS Trailer can be easily placed into service upon arrival at a customer site, saving time, money and space. The UPS-system-on-wheels meets a vital need in today's mission-critical data centers, where many customers want to take advantage of newer technology such as higher efficiency UPSs, but don't have the luxury of shutting down operations to replace legacy equipment. Furthermore, because the solution is mobile, it doesn't occupy valuable real estate within an existing building, nor does it require new space to be created. With the ability to be moved from location to location, the Eaton Mobile UPS Trailer provides a viable solution for organizations seeking to maintain business continuity during an entire upgrade process, as well as for those requiring temporary backup power at special events or large venues.

## Key benefits

- Supports critical IT loads during upgrades, temporary projects and special events
- Enables seamless replacement of aging infrastructure with zero downtime
- Unique assembly reduces cost, time and space
- Reduces complexity and time of installation, is factory engineered and tested
- Eliminates on-site construction while reducing UPS footprint
- Trailer meets all DOT standards for shipping and towing

### Eaton Power Xpert 9395P UPS

The foundation of the Eaton Mobile UPS Trailer is the 9395P UPS, which boasts an industry-leading efficiency rating of up to 97 percent in double-conversion mode and up to 99 percent in ESS mode. In addition to being powered by space-saving, cost-effective lithium-ion batteries, the unit's integration with switchgear simplifies site wiring and reduces installation costs

### Complement the Mobile UPS Trailer with Eaton services

For more than 30 years, Eaton has been a leader in manufacturing power management technologies that are reliable, efficient, safe and sustainable. Our engineering services team provides a comprehensive offering of integrated services to handle end-to-end turnkey projects, offering the expertise needed to complete a project on time, within budget and with the highest quality equipment. Whether at a single location or multiple sites, Eaton has the capabilities and expertise to function as your single source service provider.

#### We are pleased to offer the following optional services for our Mobile UPS Trailer:

- Factory Witness Testing (FWT) for electrical, mechanical and change to fire detection system
- Site Acceptance Testing (SAT)
- 7x24 Emergency service contracts
- Extended warranties
- Rigging and site work
- Installation services
- Onsite training
- Breaker coordination study
- Arc flash study
